Education

Helwan University, Faculty of Engineering Oct 2023 – Oct 2028

- GPA: 89.27
- Computer Engineering Systems Department

Experience

Full-Stack Web Trainee – DEPI Program 2025 – Present

- Participating in intensive full-stack web development training focused on React (front-end) and Node.js (back-end).
- Building modern, responsive web applications with strong emphasis on UI/UX design and user-centered development.
- Gaining hands-on experience with React component architecture, routing, hooks, and state management (Redux).
- Implementing RESTful APIs, authentication, and server-side logic using Node.js and Express.
- Collaborating using Git, GitHub, and Agile workflows across multiple real-world projects.

Web Development Member – IEEE Student Activity 2024 – 2025

- Built and maintained the chapter's website using HTML, CSS, and JavaScript.
- Troubleshoot issues to ensure efficient website performance.

Projects

Airport Baggage Carousel – ASM Diagram Automated luggage routing system using ASM

- Designed state transition diagram & control logic
- Created system equations & minimized logic
- Simulated in Proteus
- Role: ASM designer & logic solver

Arithmetic Logic Unit (ALU) Custom digital circuit for arithmetic operations

- Supports addition, subtraction, multiplication, division
- Controlled via multiplexers; outputs on 7-segment displays
- Simulated in Proteus & implemented on breadboard
- Role: Designed & implemented division circuit

Audio Amplifier Circuit Multi-stage audio power amplifier to enhance signal strength

- Designed & simulated in Proteus.
- Tested on breadboard & PCB.
- Analyzed frequency response & power gain. Role: Circuit performance analyst

Skyway Airport (Java) Comprehensive travel organizer application for trip planning.

- Book flights, hotels, and tour guides.
- "My Trips" management with MySQL database.
- Country explorer with images and travel info.
- Intelligent trip planning linked to database.
- SMTP email notifications and REST API integration.
- Java GUI for seamless navigation.
- Role: Full-stack developer & UI designer

Skills

- Programming: Java, C++, HTML, CSS

Web Development: Frontend fundamentals (HTML, CSS)

Database: MySQL

Circuit Design & Simulation: Proteus, 7-segment displays, multiplexers, parallel adders, parallel subtractors

Version Control: Git, GitHub

Team Collaboration

Problem Solving

Languages: Arabic (Native), English (Intermediate)
